

## The Snarks Walther P22 Magazine.

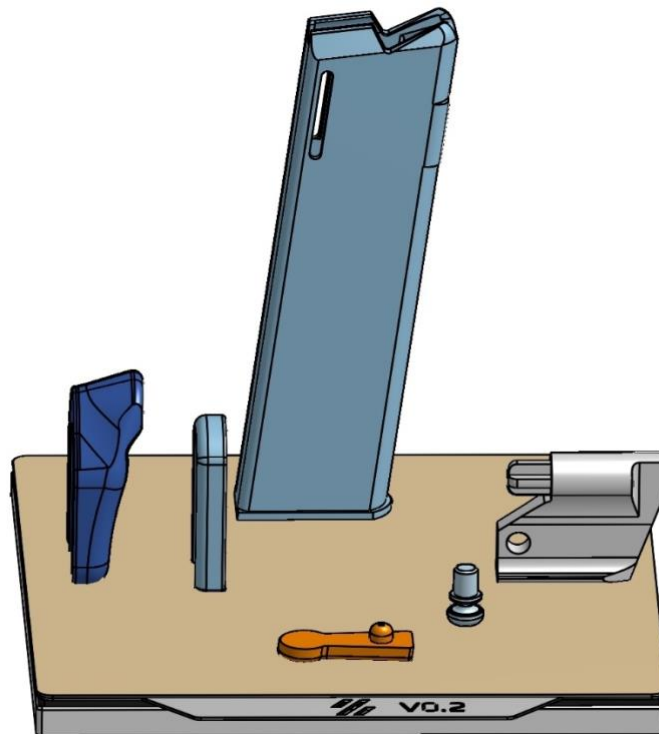

Really not a lot to say about this one.

I got a new to me Walther P22, and I really love the damn thing. However, when I went to go buy an extra magazine for it, the cheapest one I could find was \$39.95, (I'm seeing that you can get them as low as about \$30 on eBay right now.) But I've got a 3D printer and a pair of calipers, and I've seen people do CAD stuff before.

I had extra magazine springs from another project that worked out really well. I bought them from this place. <https://www.blackdogmachinellc.net/ciener-replacement-recoil-spring.aspx>

I cut mine so that about four coils were hanging out of the end of the magazine, you may be able to use a little bit less spring, I didn't really put a lot of thought into it. I'm pretty sure the original only had three coils hanging out the end. Anyway, if you buy those long springs I linked up there you can almost get three mags worth out of one spring, which works out to like \$0.50 per mag.

This is the recommended print orientation.
